

# WANDFLUH APP

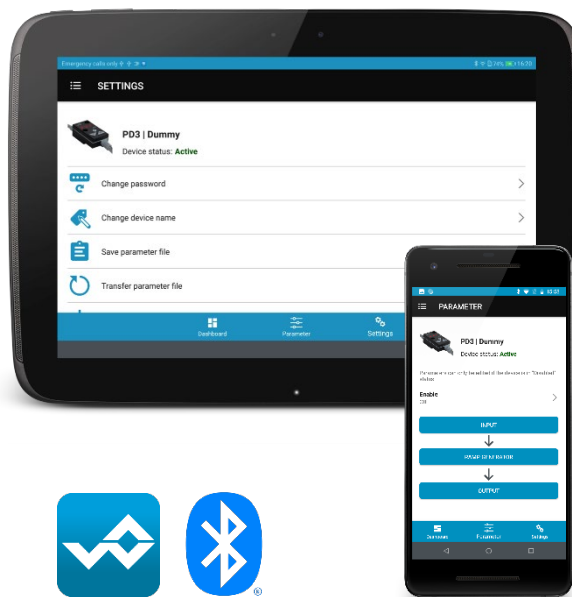

## DESCRIPTION

With the new Wandfluh app, the PD3 electronics can be parameterised wirelessly and encrypted via a smartphone or tablet. The individual amplifiers within range of the Bluetooth interface can be individually selected and parameterised.

Thanks to the intuitive operation of the software, configuration and parameterisation of the PD3 amplifier electronics is very easy. For the exchange of electronics, for example, also entire parameter sets can be read out, stored and uploaded again.

The communicated data are encrypted, so that any unauthorised access to the valve is excluded. The app is available for both iOS Apple and Android operating systems.

Due to various diagnostic options, the app is also an indispensable companion, especially for optimising a hydraulic system or error detecting in the field.

Wandfluh app on tablet and smartphone

## FEATURES

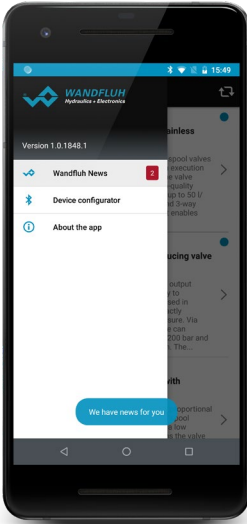

- Wireless parameterisation and diagnostics
- Password protected and encrypted communication
- Intuitive operation
- Automatic update of Wandfluh-News
- Available for iOS Apple and Android
